

ORM SERIES

Oil Retention Media

FEATURES:

- Easy to use.
- Easy to clean.
- Environmentally friendly.
- Hydrophobic media.
- Re-usable up to 20 times.
- For use on both split and emulsified degreasers.
- Use in conjunction with an existing continuous oil removal system or stand-alone mode.
- For use in both alkaline and acid-based cleaners, Soak, electro, & pre-treatment cleaners.

BENEFITS:

- Absorbs oil only, not water.
- Extends bath life.
- Extends pre-treatment bath life.
- Enhances chemical bath performance while minimizing rejection rates.
- Less costly to use.
- Does not require costly maintenance or mechanical power.
- Easy and inexpensive to discard after use.
- Squeeze by hand, centrifuge, or spin dryer.

This is a unique material called OIL RETENTION MEDIA that absorbs suspended oil from electro-plating pretreatment processes such as Soak Cleaner, Alkaline Cleaner and Acid Pickling. Unlike conventional skimmer systems and equipment, OIL RETENTION MEDIA (ORM) doesn't require any mechanical power or tedious maintenance to remove oil. Specially formulated hydrophobic properties absorb only oil molecules, and it can be used both split and emulsified type oil to extend chemical life.
